TECHNICAL PROJECTS

DineFlow – Restaurant Management & Food Ordering System

| React.js | Firebase Firestore | Vite | JavaScript

- Developed a web-based restaurant platform enabling customers to browse menus, view food details, manage profiles, and place orders online.
- Created an administrative dashboard to manage foods, categories, orders, users, inquiries, and sales with complete CRUD functionality and cloud database integration.

Employee Management System

React.js | Node.js | MongoDB | REST API

- Developed a complete employee management platform with full CRUD functionality, scalable backend database architecture, and responsive user-friendly interfaces.

Event Pro Website

React.js | TypeScript | Tailwind CSS

- Developed a modern event management web application using component-based architecture and TypeScript for scalability.

Point of Sale (POS) System

React.js | JavaScript | CSS

- Built a smart POS system with dynamic transaction calculations and real-time stock checking features.
